DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12 are allowed.
2. The following is an examiner's statement for reasons for allowance:

Claims 1, 4, 6, 9 and 11 are allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose **replacing the first sequence number with a second sequence number, wherein the second sequence number corresponds to a second RLP session, and transmitting the frame with the second sequence number to a second mobile unit, wherein the second mobile unit utilizes the second RLP session.** It is noted that the closest prior art, Chen et al. (US Publication US 2003/0005382 A1) shows communication system for providing frame re-transmission in a broadcast communication system. Frame re-transmission is accomplished only when a predetermined number of negative acknowledgement messages are received with respect to one or more data frames. However, Chen et al. fails to disclose or render obvious the above underlined limitations as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a) Chen et al. (US 2003/0005382 A1) System and method for frame re-transmission in a broadcast communication system.

b) Mark W Cheng (U.S 6,189,122) Method and apparatus for controlling data retransmission.

c) Hetherington et al. (U.S 6,859,456) Method and apparatus for checking communicated data.

d) Earnshaw et al. (US 2003/0012212 A1) Method and apparatus for transmitting data over a network within a specified time limit.

e) Hetherington et al. (U.S 6,169,732) Method and apparatus in a wireless communication system.

f) Rezaiifa et al. (U.S 6,618,375) Radio link protocol frame sorting mechanism for dynamic capacity wireless data channels.
